

Find the right RING SIZE!

Print out the page and move your favourite ring along the little circles until you find the right size. Make sure that you keep the ring parallel to the surface of the paper! And when you measure a ring with a rock, keep it so that the rock touches the paper while the ring part is slightly up in the air. If you look directly down on it, you will see the right ring size.

PS! Make sure that your printer does not distort the size of the printed image. For that you usually need to select "Actual Size" from the menu "Paper Sizing".
